DMEXBar Crack+ Keygen Full Version

DMEXBar Crack Keygen is a Windows Explorer toolbar extension that will add a couple of features that you might find useful. It allows you to resize, tile and undock explorer windows. You can save and open several files in parallel and to distinguish individual files, you can change their properties like their name, owner and date/time. Drag&drop of files works faster than with Explorer context menus. You can also open a DOS shell window in any directory or run any other user-specified program using the current directory or selected files as parameters. If you have more than one internet explorer windows open, you can select a range of them from the toolbar. In addition, you can get the path and name of the selected files via hotkeys or direct shortcuts. If you need more features than that, you can try DMEXCpl and DMEXDrop. DMEXBar Cracked Version Feature Demo: DMEXBar Features: ☑ Open two explorer windows aligned side by side. ☑ Tile all open explorer windows on the screen. ☑ Rename, change date or change attributes of multiple selected files at once either directly via the toolbar or via dialog. ☑ Split and reassemble large files. ☑ Creating "Hot Paths", which are like the "Favourites" in the Internet Explorer, for simple and fast change to these directories. ☑ Creating new subdirectories - only one mouseclick away ☑ Fast copying and moving of files between two aligned explorer windows by shortcuts. ☑ Synchronise files and directories between two aligned windows. ☑ Open DOS shell windows or run any other user-specified programs using the current directory or selected files as parameters ☑ Select and deselect files with wildcards ☑ Expand and collapse partial tree branches in the tree view of the explorer ☑ Calculate the total size or used disk space of directories including all subdirectories Note: DMEXCpl and DMEXDrop need Windows XP. DMEXBar might also run on older versions of Windows (95/98/NT) if the Internet Explorer 4 is installed including the desktop update..*** Important ***: I should probably warn you that the toolbars themselves are a big windows eating space on the computer. I had to change the size of the toolbars and 6a5afdab4c

DMEXBar Crack [32/64bit]

This is a Windows Explorer toolbar extension that adds a couple of features that you might find useful. Open two explorer windows aligned side by side. When the windows explorer shows up 2 aligned then you will be able to see both windows side by side. Just align them side by side and click OK to finish the task. Tile all open explorer windows on the screen. When you have two explorer windows aligned side by side, you can tile all of them on the screen by tapping on the "Tile" button in toolbar (see example photo above). You can change tiling options (tile size, alignment, spacing, orientation, etc...) by selecting and changing options in the Tiles tab of the settings dialog. Rename, change date or change attributes of multiple selected files at once either directly via the toolbar or via dialog. You can rename, change date or change the attributes of multiple selected files at once via toolbar directly or via dialog. Just select and rightclick on the selected files or folders and press the appropriate buttons. Split and reassemble large files. Select multiple files and folders in the windows explorer via toolbar. Press the "Split" button and then select the destination folder via dialog. After you rightclick on the files, in the "destination" window you will see a green "Re-Assamble" button. Just click on this button to reassemble the selected files. Creating "Hot Paths", which are like the "Favourites" in the Internet Explorer, for simple and fast change to these directories You can create "Hot Paths" on your hard disk just like in the Internet Explorer. To create a new "Hot Path" on the hard disk: - Rightclick on the specified folder via toolbar. - From the "Options" menu, select "New Hot Path...". - A dialog will appear with a list of available folders to create "Hot Paths" for. - Just select the file or folder in the window and press OK to save the "Hot Path". These "Hot Paths" will appear automatically in the windows explorer as "Favourites". After you press the save button, the new Hot Path will appear in the "Favourites" list and you can access it by tapping on the "Favourites" button in toolbar. To remove a "Hot Path" from the "Favourites" list, simply delete it. In the windows explorer, the created "

What's New in the?

With the release of Windows XP there is no need to use the Toolbar and the Windows toolbar to change path names of files and folders. Clicking the file name in the Windows Explorer will automatically open the "Open with" dialog from where you can easily change file names. In addition you can directly change path names of files and folders via a dialog button. The included DMEXDrop utility will do all the boring work for you. It will search the hard drive for all files, create shortcuts to the files and create "Desktop" folders. This way you can easily change all path names of files and folders in the Explorer. At the same time you can simply create new directories from within the existing directories. The included DMEXBar utility will do the following things: Create Windows Explorer toolbar buttons on the toolbar with which you can change path names of selected files and folders. Rename the selected files and folders directly via the toolbar. Create and select directories on the fly. Create shortcut files for the selected files and folders. Change attributes of multiple selected files at once. Split and reassemble large files. Create "Hot Paths", which are like the "Favourites" in the Internet Explorer, for simple and fast change to these directories. Rename, change date or change attributes of multiple selected files at once via dialog. Create new subdirectories - only one mouseclick away. Fast copying and moving of files between two aligned explorer windows by shortcuts. Synchronise files and directories between two aligned windows. Open DOS shell windows or run any other user-specified programs using the current directory or selected files as parameters. Select and deselect files with wildcards. Calculate the total size or used disk space of directories including all subdirectories. Useful commands: DMEXBarSelect all files to the clipboard DMEXBarSelect All files in the current directory DMEXBarSelect all files in the selection DMEXBarSelect all files in the selection and the current directory DMEXBarSelect all files in the selection, the current directory and the Open folder location in the Windows Explorer DMEXBarSelect all files in the
