MIDIImage is a MIDI generator program, based on the image file you have selected. The program can generate a simple MIDI file (that has one note and a scale), or, by adding several parameters, it can generate a real music performance. You can generate MIDI tracks with anything that you have in a folder. All you have to do is select the folder (where your pictures are located) to start the MIDI generator. We provide more options to the user:

- the possibility to insert a specific time-line for playing the picture file.
- to insert a specific size for the track in bars.
- the possibility to

insert a specific scale for the performance. - to insert the specific instruments. - to insert a scale to play or chords to play. - the possibility to insert the fundamental notes. - the possibility to lock the tempo to play the file and let it get for one meter. - the possibility to print or keep online the MIDI tracks MIDIImage Features: - You can select the following to generate a simple track: - Your image (PNG, JPG, BMP, WEBP). - Your image (PNG, JPG, BMP, WEBP) with a sound (standard or with drums, vocals, etc.) - Your image (PNG, JPG, BMP, WEBP) with a sound (standard or with drums, vocals, etc.) and a sound (standard or with drums, vocals, etc.) - Your image (PNG, JPG,

MIDIImage is a MIDI (Musical Instrument Digital Interface) generator for your graphic images. It allows you to create a MIDI track for your pictures, by putting them into its compatible interface. Then you can edit a few of its details. MIDIImage is now free for use. the Midi file is a piece of music, and is MIDI capable. This app takes the photos that you take with your android device, adds the music, and creates a "MIDI file." It is a great tool if you wish to create and sequence your own music. MIDI file is a standard format used by all

keyboards, MIDI sequencers, and audio players. It is 1 byte long. Each note/key has to be repeated twice, once for the sounding note, once to show in the keyboard (that's why you hear 1, 2, 2, 1, 1, 1, 2, 1, 1,...). There are 7 main things to be considered when editing the MIDI (note-on, note-off, pitch bend, etc). Each of them is needed to create a full sound. You can even save your sequence to a.mid file, which is a piece of music. This is the original format that MIDI files were created in.
