Origins AutoCAD was originally developed by the National Air Traffic Control Association (NATA) as NATA AutoCAD. The NATA organization, which was a sister organization to NATA's parent company, International Civil Aviation Organization (ICAO), had issued paper drawings and specifications for its flight planning and navigational aids in the early 1960s. This had led to large volumes of complex paper-based designs that were difficult to collate, use and share. The need for a CAD program designed specifically for this purpose was recognized in the mid-1970s, and the result was the NATA AutoCAD system. Development began in 1976 with a view to creating a 2D drafting program to complement the NATA Excelair System 2D Data Booking System, which was a full-featured spreadsheet application designed for NATA's flight plan data entry. The next year, the NATA organisation approached Autodesk with the idea of developing a CAD product. Autodesk saw the opportunity to leverage its business experience with computers to develop a drafting product with a high degree of functionality for the emerging 3D computer graphics market, which at the time was still dominated by the huge and expensive CAD systems and by dedicated large-scale systems, and by the user-oriented CAD programs then in use for electronic design automation (EDA) and mechanical design, such as Solid Works. The Autodesk staff realised that a product specifically designed for the NATA organization's requirements would be very useful for other organizations and that, in particular, it would fill a void in the 3D CAD market for an affordable system and software for drafting 3D drawings. They decided that the company would not only develop a CAD program but would also market it and support the program's initial users. The NATA organization purchased an initial license for the software and formed the Autodesk NATA Computer-Aided Design (CAD) Group to develop and market the software. The Autodesk NATA CAD Group was subsequently renamed the Autodesk NATA/ICAO CAD Group. Functional requirements The first phase of the NATA AutoCAD development, which began in 1976 and was completed by the end of the same year, saw the addition of a set of tools to be applied to a basic 2D line drawing and a text box. Two years later, this had grown into a fully functional AutoCAD system that was capable of performing most drafting functions, including 2D and

1. Technical Field The present disclosure relates to a fuel cell system having a fuel cell. 2. Description of the Related Art The fuel cell is a power generation system for producing electric energy through an electrochemical reaction of a fuel gas, such as hydrogen, and an oxidizer gas, such as oxygen. A fuel cell includes a membrane-electrode assembly (MEA) and separators. The MEA includes an anode and a cathode that are separated by a polymer electrolyte membrane. Hydrogen gas and air are supplied to an anode and a cathode of the fuel cell, respectively. An electric power is generated in an electrochemical reaction of hydrogen and oxygen in the fuel cell. The electric power is used for the supply of power for various types of electronic devices. The separators function to supply hydrogen gas and air to the anode and the cathode, respectively. As a fuel cell system, there is known a fuel cell system in which fuel cell modules are mounted in a fuel cell stack (see Japanese Laid-open Patent Publication No. 2013-117712). The fuel cell system includes a plurality of power generation blocks connected to each other. Each power generation block includes a plurality of fuel cells, and the plurality of fuel cells are connected in series or in parallel to form a fuel cell stack. The present invention relates generally to a reel mower having a reel assembly comprising a hollow hub and a cover which is pivotably connected to the hub to selectively open and close an opening formed in the hub. There has been proposed a reel mower comprising a reel assembly for guiding a crop material to be cut to a discharge outlet. The reel assembly has a hollow hub, a plurality of spinning reel blades provided in the hub, and a cover which is pivotably connected to the hub to selectively open and close an opening formed in the hub. The reel assembly is ca3bfb1094

NEW YORK In a stinging statement today, Amnesty International charged that Sudan was exporting slaves across the Middle East, using a Sudanese program that it helped establish. "The system which was set up in Sudan in the early 1990s to send slave-like women to places like Saudi Arabia is still running," said the London-based organization. The International Organization for Migration, a U.N. agency, estimates that hundreds of thousands of women from Sudan are trafficked annually, mostly to Saudi Arabia and other Gulf states. Sudanese women say that when they reach their destination, they are forced to work, often for months or years, in brothels and textile mills, and they are not allowed to work at home.[bacchante.com](http://bacchante.com) Become a bacchante Become a bacchante Friday, September 27, 2011 New Release - The Histories of Prydain I'm excited to announce the release of The Histories of

Prydain, book 1 of the Prydain Chronicles. This is the first of a trilogy, and was released last Thursday. So in all reality, it was released about one and a half weeks ago. This series is in the fantasy genre, but I think of it as a historical fantasy. The magic is more plausible than in other fantasy, and the characters are much more like people from the past. The setting is close enough to the present that people would recognize it, but far enough in the past that it wouldn't seem like an alien place. The book was edited and published by Gryphon of Legend Publishing, which is one of the best small independent publishers I've worked with. All the fine work they do is because they love what they're doing, and support their authors. I would highly recommend them to anyone who's considering publishing. Included in the book is a full length excerpt and a brief blurb. On the back there are a few words about the author, and some suggestions for further reading
