What's New in the?

Q: Java: Why is my program breaking on this for-loop logic? I have an application that I am porting from C# into Java, however, I am new to Java. In the C# code, I have a for-loop that multiplies a value in one array by a value in another array until either one of the arrays is exhausted. `for(int i=0; i < array1.Length; i++) { intArray1[i] = (product/intArray1[i]) + 1; } if (array2.Length > 0) { intArray2[j] = (product/intArray2[j]) + 1; } }` I know that Java does not have an array with the length of 0, so I have gone about this logic in Java by declaring the arrays like so: `int[] intArray1 = new int[10]; int[] intArray2 = new int[10];` However, I am encountering a problem where it seems like the program runs the inner loop one too many times. For example, say my arrays are this: `intArray1 = { 3, 5, 8, 10, 5, 8, 10, 5, 7, 10 }; intArray2 = { 2, 3, 5, 10, 10, 10, 10, 10, 10 };` Initially, the program makes all the products: $3*2 = 6$, $5*3 = 15$, $8*5 = 40$, $10*8 = 80$, $5*10 = 50$, $7*10 = 70$, $10*5 = 50$, $7*7 = 49$, $10*10 = 100$. And after the loop is done, the output will be: `{ 5, 5, 5, 5, 5, 5, 5, 5, 5 }`
