Supplemented with online tools to support critical, evidence-based research.Using a translation model to communicate CKS biology and effects to immunocompromised patients. Improving recognition of serious infection early is key to saving lives. The Chronic Kidney Disease Epidemiology Collaboration (CKD-EPI) equation is a model that adjusts serum creatinine for patients with CKD. When serum creatinine is used to estimate glomerular filtration rate (GFR), this calibration can be used to translate the CKD-EPI equation into an equation for interpretation of estimated GFR. In an era of concurrent infections, the recognition of overwhelming infection is more important than ever.(Amonkhet, Theros) - Choosing between square brackets [] and parentheses () has been a bit of a conundrum when writing lists of creature types. The consensus seems to be that using square brackets is more consistent with the resulting tokens; for example, the creatures of the Ghoul tribe have the word "Ghoul" followed by a list of unique creature types, whereas the creatures of the Red Wasp tribe have a list of creature types followed by the word "Wasp". However, some card descriptions (Eternal Masters, for example) have square brackets, and others (Oxidized Scales, for example) have parentheses. So we had e79caf774b
