Smooth Away Zones Agility enhances the ball's control in tight spaces, bringing more control to slippery aerals and passes in tight and crowded areas. Balancing mobility and balance has been a key focus with the development of HyperMotion, and new re-worked tools have been added to aid with this. Compound Joystick: Players can now choose to control EA SPORTS FIFA's controls with a compound stick or mouse. Switching between both methods can be made with one button in the first person and another in the third person. Gameplay Flow: Under the hood, the core gameplay logic of FIFA is also getting a revamp to improve flow and freedom of movement. This will mean players are able to do more things in open space, while also making it easier to play through the midfield. Leg Changing Tool: Many players adjust their own legs when receiving a pass. With the new leg changing tool, players can move their leg when receiving a pass rather than having to hold their own leg. This leg movement will be more intuitive in some situations when players are moving their legs to block off an incoming pass. Ball and Dribble Control: Players are able to control the ball with a tighter radius by dragging the sticks more quickly. Players can also create more potent dribble moves by changing direction more swiftly. Passing: Players are able to adjust the speed at which they pass the ball to other players. This makes it easier to play with your back to the goal and in tight spaces. FIFA's first-person view is also being re-worked. The camera will now stay close to the player at all times, and will naturally move to follow the player. In FIFA's current first-person view, the camera is static and does not move with the player. This may improve the player experience of taking a shot and following a pass in tight spaces. Hover Over Player Ornaments: An on-screen orb will now be shown to display the player's influence in the match. As well as highlighting a player's influence, this will also be used to highlight which players are affecting where. On-screen player influence will also be highlighted to show a more refined, tactical presentation of player's influence. Ball Sorting: FIFA will now keep track of multiple balls at once, allowing players to switch between multiple balls in a controlled fashion. Previously,
