* The TOC on the page below is for desktop users and not the latest version of AutoCAD. AutoCAD History AutoCAD has had a long history. It was first developed in 1977 by Carnegie Mellon University's Advanced Design Group. It was not until 1982 that the software was released to the public and it was the first CAD system developed for microcomputers. In 1986 the software was offered on a CD ROM. In 1991 the product was renamed to AutoCAD. It has been through many design changes in the last three decades and is still available on the market today. AutoCAD Features AutoCAD software is now available on multiple platforms: PC, Mac, mobile, tablet and web. AutoCAD allows the user to work on any of those platforms at any time. The most important feature of AutoCAD is the ability to run a variety of projects and is therefore constantly updated with new features. In addition to the drawing capabilities, AutoCAD includes some useful special tools for industrial design including tools for electrical, mechanical, and chemical engineering projects. Below are the features of AutoCAD that are of greatest interest for the civil engineer. Drawing Techniques AutoCAD supports different drawing techniques and types of drafting. Most important for the civil engineer is the ability to create G-Code (G-Codes) which is the standard language used in the CNC (Computer Numerical Control) machine to machine. Below is the list of main drafting techniques supported by AutoCAD: Vector: Use of geometric shapes to represent physical objects on the drawing. Vector drawings can be traced over and edited to enhance the shape. The most common type of vector drawing is the line drawing where each line or curve represents the edge of an object. Vector drawings are commonly used for mechanical drawing. Use of geometric shapes to represent physical objects on the drawing. Vector drawings can be traced over and edited to enhance the shape. My requirement is like below I have two sets of data, 1. Keyword data 2. Hits(Category wise hits) Now, the idea is that the keyword data is huge, whereas hits is small. In order to avoid storing this in DB, I am thinking of storing this in Solr and whenever a user performs a search, it hits the cloud. But what I am looking for is, to access this data from my application. Does any one know of any API for this. A: There are no standardized APIs to access Solr. You can do what you mentioned by Generate your own API Do a 'curl' to your Solr box and parse the results. Use the Solr 'XML-RPC' to access the core. You can use the first approach. If you need a high level API, use the 2nd option. If your data is small, use the 3rd option. I've outlined a few examples for option 3 in my blog: lons, B. D., & Kenyon, S. J., 2002,, 564, 353 Sartori, M. J., Lépine, S., Dias, W. S., Alessi, B. S., Cortés, E., & DAML/INPE, 2003,, submitted Tiede, G. P., Frogel, J. Close Autocad. Click File > Save As. In the Save As dialog box, browse to where you want the file saved and click Save. If you're prompted to confirm, do so. Reference the sample data The sample data directory is %ProgramData%\Autodesk\Applications\Autodesk\Data\CAD\2009\English\Dwg\ SampleData\Data\ The training sample data is found under this path. Use the sample data The sample data contains some sample training data that you can use as a starting point for creating new training data. To use the sample data: 1. Click File > Data > User Data. 2. Click the Browse button. 3. Navigate to the location where the sample data is saved. 4. Click OK. NOTE The sample data is located in the %ProgramData%\Autodesk\ Applications\Autodesk\Data\CAD\2009\English\Data\ folder. Start a new training session The sample data contains a suite of 27 training files. 1. Click File > Data > New Training. 2. Click the Browse button. 3. Navigate to the location where you saved the file you created with the keygen. 4. Click OK. The new training session will start. NOTE The data is located in the %ProgramData%\Autodesk\ Applications\Autodesk\Data\CAD\2009\English\Training\ folder. Close the training session When you're done with your training session, you can close it by clicking File > Exit. Reference the service configuration file The service configuration file is %ProgramData%\Autodesk\Applications\Autodesk\Data\CAD\2009\English\ SampleData\Configuration\Training\ServiceConfiguration.ini. You can find more information about the service configuration file in the Autodesk Training documentation. Do your own training When you're done creating your own training, you can save the training files to any location you choose.
