q: mysql: how to join a view to query that view i have a mysql database as a client that has a view as a source, with an inner join to another view in that view, that generates a table. the problem is that when i run the query with the view, it returns the same result as the original table. so i am not sure how to make it return the view. i have the following three views: create view `v\_routine` as select  
`routine`.`routine\_id`, `routine`.`entry\_id`,  
`routine`.`routine\_name`, `routine`.`routine\_name\_id`,  
`routine`.`routine\_description`, `routine`.`routine\_start\_time`,  
`routine`.`routine\_end\_time`, `routine`.
