It can be downloaded from the Store and doesn't need Internet access to perform calculations, so you can fire up this app even when you're offline. Set your gender, age, height, weight, and activity level In the main window, you can enter your gender, age, height (centimeters), weight (kilograms) and activity level between "little or no activity", "moderately active" and "very active". Then you can press "Calculate Health Numbers" in the bottom-left corner of the screen. Easily perform calculations The tool shows your score (BMI), classification (underweight, normal, overweight etc.), BMI category of normal classification and risk to health, as well as the resting metabolic rate (calories per day) and recommended daily intake (calories). Doesn't support richer features Unfortunately, Health by the Numbers doesn't provide additional useful information. For example, it doesn't tell you what defines each activity level. Also, it supports only the metric system, which means that those who are only accustomed to the imperial system have to resort to an external unit converter to transform feet to centimeters and pounds to kilograms. Nevertheless, you can test this app yourself. Health by the Numbers Description: Organize your health data with the simple, fast, and efficient Health by the Numbers app!
