WX_PLAYER X64 [Updated]

WX_PLAYER (weather player) is a user-friendly and effective piece of software meant to function as an audio message generator for COM-port connected repeaters, enabling you to listen to news about the weather. Clean and simple appearance The utility displays a small and compact user

interface, where all of its functioning parameters can be accessed and customized, in just a few clicks. The dedicated menus enable you to further adjust `WX_PLAYER`, so you can play the messages that you need without too much effort. Define the weather information you want to render through your repeater For starters, you will need to choose the weather station that you want to work with, from the 'WX Source' menu, for instance 'Davis Weather Monitor II', 'Davis

Vantage', 'Lacrosse' or 'APRS Data'. Subsequently, you can individually select the information you are interested in, specifically 'Indoor' and 'Outdoor' temperature, 'Atmospheric Pressure', 'Trend', 'Wind' and 'Gust' speed or 'Direction', being able to refresh the data at preferred time intervals. Moreover, WX_PLAYER allows you to opt between US and International unit systems, from the 'File' menu; from this location you can also select the 'Compass Card'

with '8 Directions' or '16 Directions', according to your needs. Other configuration options include the 'Announcement Contents', such as the audio volume, the date format, the 'Hello' and 'Goodbye' messages, along with the periodicity of the task, in minutes. A useful weather reporting tool To sum it up, `WX_PLAYER` is a handy program that can function as a standalone application or as an assistant for `SIMPLEX`, allows you to render the weather

conditions as audio messages.

Get the latest radio news and weather via a COM-port connected repeater Clean and simple interface Enable audio sample playback on the current channel Shows up to 16 frequencies and a large area map Support GPS positions Global distress beacons Automatically register your station on the Echolink online service KEYMACRO, is a first step to entering the global emergency field and offers

valuable assistance in the case of a radio or battery failure on board. To achieve this, KEYMACRO will be able to provide vital information and guidance for your current location and will be able to provide the following services: *

- * RSSI (signal strength) measurement
- * APRS position
- * Radio beacon network
- * One click battery check
- * Search for distress beacons on the internet
- * Map and information

KEYMACRO has two sections, 'Interface' and 'Tools'. The

'Interface' section of KEYMACRO provides a clean and easy to use interface to select your radio channel, allow the user to toggle between the frequency channels of your repeater. To keep your repeater stable, every time the user selects the frequency, a location fix is retrieved from the associated satellites and a spectrum graph is shown, showing the RSSI level of the signal at the time of the selection. This way, the user can clearly see which channel is

more stable and if the radio connection or the frequency is unstable. For users of the 'Channels' section of KEYMACRO, you can see at a glance the radio frequency and signal strength of your channel. The 'Interface' section also has a 'Start' button, so that you can start the application and the sound of your choice. The 'Tools' section of KEYMACRO gives you complete access to the following features: * The RSSI of the selected frequency * Map of frequencies and their proximity

* Spectrum graph showing the RSSI level and the power level of the signal * Station details * Status bar showing the station's current status (working or not) * Radio beacon list * One click battery check * GPS position * Countdown for the battery's charge * Search for distress beacons on the internet * Auto-register of your radio station on the Echolink service

KEYMACRO is a great asset to any radio ham. It will keep your radio stable and allows you to immediately [2edc1e01e8](#)

WX_PLAYER Free

WX_PLAYER is a powerful radio-replicating tool for your COM-port connected repeater. When working in a repeater, **WX_PLAYER** displays the weather conditions obtained from the selected "WX Source" - an APRS and DSM daemon. In addition to the weather information, **WX_PLAYER** allows you to define the "Hello", "Goodbye" and announcement contents, to allow you to customise your own messages.

Description: A utility that allows you to view the statistics of the connected repeaters, such as the number of bytes sent and received, as well as the bytes sent and received per minute.

Description: One of the best ways to visualize your APRS frequency, and to view and filter the packets received by your computer. This program allows you to see your APRS messages in a particular format (with a high number of statistics), in order to analyse them.

Description: One of the best

ways to visualize your APRS frequency, and to view and filter the packets received by your computer. This program allows you to see your APRS messages in a particular format (with a high number of statistics), in order to analyse them.

Description: A utility that lets you listen to the packets received by the COM-port connected repeaters, including the number of bytes sent and received, the number of bytes sent and received per minute, and the number of bytes sent

and received per minute per repeater. Description: A useful program that allows you to define your own long strings. The application remembers the last string you used, as well as the length and colour of the text that you want to use.

Description: An excellent application to create your own Custom Messages (CM) with a wide range of styles and colours.

What is a Custom Message (CM)? One of the first things you must understand is that most APRS repeaters use the format

of the Custom Messages, or CMS. Description: This application will help you create a custom messages with a wide range of styles and colors. The application remembers the last string used, as well as the length and color of the text that you want to use. Description: A powerful application that allows you to create a wide range of custom messages. The application remembers the last string used, as well as the length and color of the text that you want to use. The CM can be
